SIEMENS GOVERNMENT SERVICES INC., IS AWARDED 2nd YEAR OPTION BY THE U.S. ARMY - ACCESS CONTROL POINT (ACP)

Reston, Virginia, April 13, 2010 – Siemens Government Services (SGS), an integrator of Siemens innovative technology products, services and solutions to the federal government announced today that it received an additional option year on its existing Access Control Point (ACP) contract with the U.S. Army. This award is anticipated to have a total contract value of up to \$9M.

The ACP program provides maintenance and repair services to over 3,000 pieces of access control point equipment ranging from mobile barriers, mobile light towers, GE Itemiser and Vapor-Tracer Explosives Trace Detectors (ETD), X-ray scanners and handheld vehicle undercarriage inspection mirrors to over 160 installations throughout the U.S., Europe, Asia and the Pacific.

“With decades of experience combined in the security marketplace, SGS partnered with AES International Corporation to provide the worldwide technical footprint required for this large-scale deployment of support services,” said Gordon Phelps, SGS’ ACP Program Manager. “Both companies’ skill sets are complementary, offering our customer a proven track record of delivering state-of-the-art security solutions, outstanding customer service, and the peace of mind to know that we understand their mission and pride ourselves on exceeding their security expectations.”

Services provided will be managed and coordinated through a central SGS Program Management Office (PMO) and Customer Service Center. The PMO will utilize an enterprise asset management application to provide real-time operational and fiscal data to the U.S. Army; in turn, allowing the Army to make more informed fiscal decisions regarding asset lifecycle management in an efficient manner.
